Projects

Credit Risk Prediction with Machine Learning

- Conducted comprehensive data preprocessing including imputation and one-hot encoding, ensuring data integrity and feature readiness for modeling in both practical and cloud-based settings.
- Achieved an accuracy of 76.6% with RandomForestClassifier and 74.2% with XGBoost Classifier, employing extensive model evaluation techniques and serialization for future deployment across practical and IBM Watson Cloud platforms.

News App using Android Studio

- Developed using Java and Android Studio, this application leverages API integration to fetch real-time news data from multiple sources.
- Utilizing asynchronous tasks, it efficiently retrieves and displays news articles, enhancing user experience.

Chatbot using IBM Watson Studio

- Crafted a chatbot with IBM Watson Studio and Watson Assistant entities.
- Seamlessly integrated into a WordPress webpage for interactive user engagement.
